

FIELD TUNER

What is a Field Tuner, and How Does it Work?

The Field Tuner is a specially designed antenna that collects and directs the energies that constantly bathe the Earth, also the energies the Earth emits. The beneficial energies that are emanating from space, and also the Earth, are directed to specific areas that are defined by the placement of the Field Tuner and the special rods (optional). Some of the energies that the Earth emits can have the tendency to wander like drunken sailors. These wandering energies are stabilized and harnessed to the benefit of the field.

To properly install the Field Tuner requires a special understanding of how the Earth's energies flow, and how they can best be utilized to enliven the soil. When the Field Tuner is properly placed in a field, the added concentration of subtle earth energies helps the soil to achieve a balanced state with increased vitality.

The Field Tuner can also act as an antenna to receive specially broadcast signals that are created for each location where the tuner is installed. These signals can be directed towards any kind of imbalance in the soil or the plants, depending on what each situation requires.

The goal of working with the universal flow of energies and the Earth's energy tide is to increase the vitality of the soil being managed. Using the Field Tuner system to help balance and increase the soil's vitality is one of the cornerstones in this comprehensive management program.

2018 updates to the field tuner are additional crystals to hold more frequencies including bless the water, prayers of the four directions, prayers of forgiveness from Wings of Healing by Howard Wells, Psalms in the ancient Hebrew by Gyora Novak and much, much more.

The new solar powered antenna features the new round BETAR COIL which gives a much smoother energy flow.

Cost: \$1895.00 (Installed, plus expenses)
